

# G1 - FINAL RUBRIC (60% of the final grade<sup>1</sup>, with C1 multiplying)

ITEMS: Oral presentation, written report, technical integration, model/evaluation iteration, value assessment and legacy

Deliverable: A PDF file, preferably with the structure of a paper, with a **maximum of 6000 words in no more than 20 pages** (references and appendices are excluded from the count). This final deliverable can reuse material from the other reports. Do not use external links (Trello, googledocs, etc.) that may change from the time of delivery: if you use these tools, copy the material with the paper, preferably in the appendix.

Items that we will look for and criteria for evaluation according to the following table (IMPORTANT: this is what we will evaluate, NOT the order or sections that you have to follow in your report):

| Items                                                         | Excellent (8-10)                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Good (6-7.5)                                                                                                                                                                                                                                          | Satisfactory (5-5.5)                                                                                                                                                                                                                                            | Needs improvement (0-5)                                                                                                                                                                          |
|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Oral Exposition [UNIT 6] (Weight= 1.5)</b>                 | The students have been able to transmit the ideas very clearly, the motivation of the work and the insights. The quality of the slides and the graphics are impeccable, with the right element for illustrating each point of the story. They make gestures, use expression recourses and really engage the audience. They are telling a story. They answer the questions correctly and precisely.                                                                    | The students have been able to transmit the main ideas and the results. The presentation is well organised and supported by graphics. They make some gestures, avoid being monotonous. They are telling a story. They answer the questions correctly. | The students transmit what their project is about. The presentation doesn't seem to have a clear organisation, and graphics are used by availability rather than opportunity. They make a monotonous presentation. They answer most of the questions correctly. | The students don't transmit the key ideas. The presentation is messy, boring and not well supported by graphics, with mistakes or not knowing how to follow. They answer many questions vaguely. |
| <b>Written report [UNIT 2c] (Weight= 1.0)</b>                 | The students have been able to transmit the key ideas very clearly, the motivation of the work and the insights. The quality of the report is impeccable, including formal issues, lots of well cited and useful references, etc. It tells a story. A joy to read.                                                                                                                                                                                                    | The students have been able to transmit some of the main ideas and the results. The format and content of the report are good, with references. It is easy to read and precise.                                                                       | The students have selected some ideas for the report but not the most important ones. The document is hard to understand or confusing at places.                                                                                                                | The students have put some things together, but the writing is rather messy and disorganised. A pain to read.                                                                                    |
| <b>Technical integration (Weight= 0.5)</b>                    | The students have mastered different new technical tools and their integration and have used them appropriately for their goals. The work and expertise seen during the course are reflected in the technical solutions, which are very elegant and taken the best from the state of the art and the literature. The solutions show initiative and originality.                                                                                                       | The students have integrated several tools, some new, and used them appropriately. The solutions reflect an important amount of effort and adequacy for their needs.                                                                                  | The students have used some tools appropriately for their goals. The work and expertise seen during the course are reflected in the technical solutions.                                                                                                        | The students use inappropriate tools. Not enough effort has been put in finding the right tools or learning new ones.                                                                            |
| <b>Model / evaluation iteration [UNITs 3,4] (Weight= 1.5)</b> | The students have tried many different models and variations of their features, chosen the right metrics and evaluation protocols, and improved the metrics incrementally. They have used packages and tools for hyperparameter optimisation and automating the iterative improvement.                                                                                                                                                                                | The students have tried many different models, chosen the right metrics and evaluation protocols, and improved the metrics incrementally.                                                                                                             | The students have tried a few models. There are some issues in the evaluation of the models or the chosen metrics.                                                                                                                                              | The students have tried very few models or evaluated inappropriately, with wrong model selection or overfitting.                                                                                 |
| <b>Value Assessment [UNITs 1, 2c, 5] (Weight= 0.5)</b>        | The students have identified the final value and novelty of their project and its applicability, the beneficiaries and final limitations. They have clearly illustrated how their models would be used in a real situation. They also identify the impact of the data product and the risks of its use. They see the big picture.                                                                                                                                     | The students have identified the final value of their project and its applicability, the beneficiaries and final limitations. They also identify the impact of the data product and the risks of its use.                                             | The students have briefly identified the final value of their project and its applicability, but have then been obsessed by the details of the models without seeing the big picture.                                                                           | The students fail to transmit what the purpose of all this will be and why this will provide value and why it will be novel.                                                                     |
| <b>Legacy [UNITs 2c, 5] (Weight= 0.5)</b>                     | There is a clear plan to disseminate the project after finished, how and where code and data will be left, and their report, as well as documentation to ease replicability. There is a plan to make the project grow after the course: a publication, an app, a startup, etc. They have identified the lessons learnt. The team has developed what SDG will be impacted and how the project will impact them, especially sustainability.                             | There are some ideas on how to disseminate the project after finished, with code, data and report made available. They have identified the lessons learnt.                                                                                            | Code, data and report made available. Some lessons learnt identified.                                                                                                                                                                                           | Code, data and report not planned to be available. No lessons learnt identified.                                                                                                                 |
| <b>Seminar Use (Weight=0.5)</b>                               | The team has used many ideas, concepts, tools, and methodologies seen during the course seminars (units) and have explained why they consider them appropriate for their project, or have introduced alternative elements from some of the sources provided (or new methods and tools) also justifying why they are better or more suitable than those seen during the seminars. They use AI tools extensively and explain their potential and limitations in detail. | The team has used some ideas, concepts, tools, and methodologies seen during the course seminars (units) and have explained why they consider them appropriate for their project. They have used some AI tools and explained them.                    | The team has used some ideas, concepts, tools, and methodologies seen during the course seminars (units). Some comments are made about the use of AI, but they are vague.                                                                                       | The team has used very few ideas, concepts, tools, and methodologies seen during the course seminars (units). Some AI tools have been used but there's no explanation about it.                  |

<sup>1</sup> There will be a retake, in about two weeks. When you do the retake, please highlight in a different colour or in some other way the things that you have changed wrt. the first version.
